

**CPI2-B1-TIC2K – universal programmer**

---

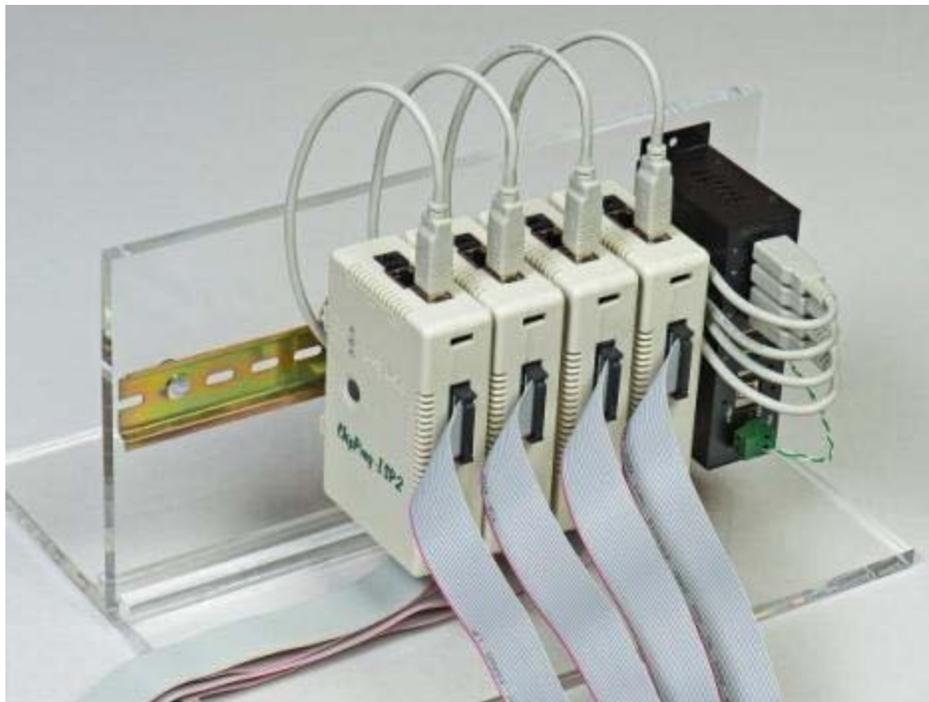

## ***CPI2-B1-TIC2K in-system device programmer***

This **preloaded** device programmer bundles a standard **CPI2-B1** single-channel device programmer with a device library license that enables programming of a variety of Texas Instruments C2000™ devices currently supported by Phyton. See a list of the preinstalled device library licenses in the matrix below. Plus, as any other preloaded device programmers, this bundle includes the free **Basic Device Library** license.

The CPI2-B1-TIC2K device programmer will automatically enable programming of all new devices belonging to the Texas Instruments C2000™ device library below that Phyton will support in the future – no new purchase is required.

To expand the CPI2-B1-TIC2K device list, additional **CPI2-D-xxxx** device library licenses, not included in the CPI2-B1-TIC2K bundle, can be purchased and installed by the programmer's user.

Bundled licenses	Description
Basic License	Free <b>Basic Device Library</b> license that supports all serial flash memory devices and selected 8- and 16-bit microcontrollers from different manufacturers
CPI2-D-TIC2K	Texas Instruments C2000 device library license
