Product Overview

Mini-Circuits' TCP-2-182-75X+ is a 75Ω 2-way 0° surface-mount power splitter/combiner covering the 50 to 1800 MHz frequency range, supporting bandwidth requirements for DOCSIS® 3.1 systems and equipment, as well as other broadband applications. This model can handle up to 0.5W RF input power as a splitter, and provides low insertion loss and low phase and amplitude unbalance. It features core and wire construction mounted on a 6-lead plastic base (0.16 x 0.15 x 0.16") with Mini-Circuits' TopHat® feature to improve speed and accuracy of pick and place assembly. This design requires external capacitors and resistors for impedance matching and cycling isolation between the output signals (refer to electrical schematic).

Key Features

Feature	Advantages
Wideband, 10 to 1800 MHz	Optimized for low insertion loss at the high end of the downstream band, this device is suitable for many broadband applications including DOCSIS® 3.1 systems and equipment, VHF/UHF, CATV, cellular, and more.
Low insertion loss, 0.8 dB	The combination of 0.5W power handling and low insertion loss makes it a suitable candidate for distributing signals while maintaining signal power.
Good isolation, 26 dB	Minimizes interference between ports
Low unbalance: <ul style="list-style-type: none"> • 0.15 dB amplitude unbalance • 2.0° phase unbalance 	This model produces nearly equal output signals, making it ideal for use in parallel path /multichannel systems.
Top Hat® Feature	Improves speed and accuracy of pick and place assembly and provides clear device marking for visual inspection.
